(a) where each pair splits
vehicle / animal
vehicle / vehicle
animal / animal
σ_{bif} of the model
σ_{bif} of the data
(b) the over-produced class wins the split
lopsidedness h of the model
log over-production of class a minus class b
(c) how often each class is generated
256-step SDE, our classifier
256-step SDE, ViT
18-step Heun, our classifier
18-step Heun, ViT
generated / expected
horse
automobile
truck
frog
airplane
dog
ship
cat
deer
bird
